01. Policy:

01.1. The blood bank has a process to confirm the ABO-RhD of donated blood **after the initial labeling.**

02. Definition :

02.1. N/A

03. Purpose :

03.1. To confirm the ABO-RhD of donated blood and to resolve the discrepancies before releasing any blood/blood components.

04. Procedure :

After the initial labeling, the blood bank technician performs the forward blood grouping ABO and the Rh-D type from the integrally attached segment from the RBC component:

- the blood bank technician removes the batch of the units of PRBCs from the unscreened refrigerator and arranges them on the bench or on the trolley with their serial number by order.
- the blood bank technician labels tubes with the corresponding serial number.
- the blood bank technician takes a segment from each unit and puts it in the tube having the same serial number as the PRBC unit.
- the blood bank technician returns the units of PRBCs again to the unscreened refrigerator.
- the blood bank technician performs the forward ABO group and the Rh-D type by gel method (the first choice) or tube method (if gel card not available). (cross reference policy LAB-61)

- the blood bank technician writes the results on the special worksheet for blood grouping
- the blood bank technician compares these results with those performed from the EDTA tubes.
- If any discrepancy is found, the blood bank technician quarantines all the units (all the batch: PRBC, FFP, Platelets) and informs the Blood bank doctor.
- the Blood bank doctor investigates and resolves the discrepancies before the releasing of any blood/blood components.
